INTRODUCTION

COMPANY PROFILE

KESHAV ENTERPRISES is pleased to introduce ourselves as a proficient and Experienced team of turbine Inspection, Erection, Commissioning & Maintenance Company In the field of power Generation Services. We are in this business particularly in the field of Erection, Commissioning and Maintenance Services of Power Plants, Sugar Mills, Paper Mills, Refineries, Petro-Chemical Industries, Agro-Industries and Supply of their Spares like Oil Filters, Strainers, Expansion Bellow, Rubber Bellows, O-rings, etc. as per requirement.

KESHAV ENTERPRISES is a growth oriented, professionally managed organization with we equipped office & work Shop, located in Shamli, Uttar Pradesh. This is promoted by a group of engineers having over a decade of experience in Erection, Overhauling & Trouble- Shooting of Turbines We are enclosing herewith the profile of Key Personnel in the organization and product range for your kind perusal. In this regard er are requesting you to kindly enroll us your vendor and give us an opportunity to serve your esteemed organization.

Thanking you and assuring you our best attention and prompt services all the time.

Our Commitment: We are committed to

Provide our clients with a full range of high-quality products and services in various fields. Carrying out all aspects of work to high level of professionalism and excellence. Providing qualitative workmanship

CONTACT NO. 91492299448/6397363268

SERVICES

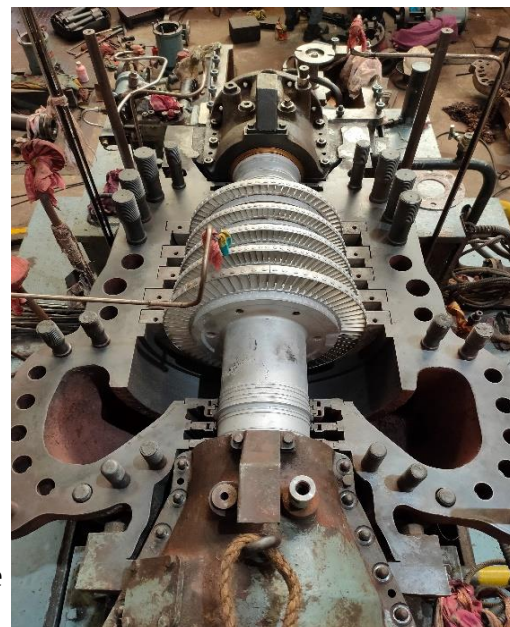

OUR MISSION

Is to provide best quality products & services by maintaining high standards of manufacturing low cost, on time delivery customized products & client satisfaction.

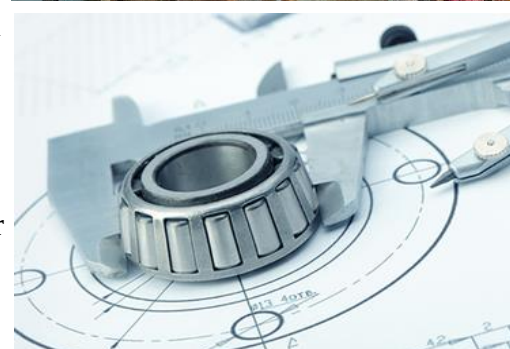

ENGG. SERVICES

KESHAV ENTERPRISES Services provide Detail Thermal and Mechanical calculation and Engineering drawings of Turbine to the Steam Turbine manufacturer, who want manufacture steam Turbine, from 5 KW to 27 MW. (Back Pressure or Condensing, Single stage or Multi stage, Drive or power, Horizontal or vertical, Top exhaust or bottom exhaust). We provide detail engineering drawings for various range of steam driven oil pump for turbine as per requirement and manufactured steam drive pump also. We provide engineering support to other turbo machinery companies or to customer for up gradation, and retrofitting. We provide detail manufacturing drawings of spare components of steam turbines of Indians as well as overseas manufacturer, to other turbo machinery companies or customer, so that turbine user can get cost effective and OEM quality spares or customer can manufacture himself. We provide specification for the brought-out items used in steam turbine, and provide support to switch to similar other makes, so that customer can be saved from extra ordinary cost of proprietary items, used by turbine manufacturer by hiding the name plate and specification. Design, Engineering, Manufacturing, of oil cooler, filters, change over valve, gear pumps, lubricating oil system etc. Re-powering of turbines, that is increasing the power output / efficiency.

REVERSE ENGG. SERVICES

KESHAV ENTERPRISES provide reverse engineering and preparation of manufacturing drawing of the component at site/Workshop for any make turbine and other components also, as per the requirement of customer. We do PMI for the exact identification of material used for the components and suggest equivalent Indian or easily available materials in India. We used from normal instrument to Copying lathe, Coordinate Measuring Machine 3D-Laser scanner for capturing physical shape. We used international engineering practices to generate manufacturing drawings with providing required tolerances, finish, Parallelity, Concentricity, Requirement of pre or post heattreatment, roughmachining and Pre-Final Machining and final machining drawings as and where required.

SERVICES

FIELD SERVICES

■ PRE-SHUT DOWN PLANNING

Achieving a successful overhaul means planning well in advance. KESHAV ENTERPRISES Services for pre-shutdown planning provides greater insight into what is needed for the overhaul, giving your greater predictability for cost and time budgeting. We step in before your planned overhaul begins to provide a detailed scope of the rotating equipment in collaboration with the overhaul shutdown planning. Also importantly, serviceable spares are critical to the success of rotating equipment overhauls. Our complete onsite inspection of stocked spare parts delivers a detailed report that includes recommendations for repairs and stock shortfalls.

■ PLANNED OVERHAULS

KESHAV ENTERPRISES Services depute Experienced Service Engineer for the overhauling of steam turbine. We prefer to send Ex service engineers of Triveni Turbines, Belliss India, Maxwatt, Man Turbo, Kessels Engineering, Chola Turbo, Kris Chakra, DLF-Skoda, BHEL, Siemens, KKK, ABB etc based on turbine to be overhauled. Some of our associated engineers have good exposure in overhauling and trouble shooting of various make. Our Overhauling starts with proper planning of required tool and tackles, tentative spares, Consumables, man power, work shop facilities etc. So that overhauling can be completed in planned time. With opening of each component existing condition of components, Clearances, gaps and sizes measured and recorder so that reports should be available for any decisions. We also do the overhauling on turnkey basis, in which we provide tools and tackles, consumables, man power etc.

■ TROUBLESHOOTING

We make available engineers on call for Troubleshooting or emergency response on 24x7. Our associated engineers are located at various locations so whenever any call comes for trouble shooting, we try to arrange engineers from nearest location of site. Our experienced engineer starts guiding to operators at site, so that machine services can be resumed by proper checking and removing the fault over phone. As engineers, we understand what it means when equipment fails to work as you expect. We know it is crucial that your machinery is back working again swiftly and safely. There's no room for error, and time is of the essence, which is why you can rely on Keshav Enterprises Services for immediate response to your unexpected maintenance requirements, wherever and whenever they may be.

SERVICES

■ MACHINE ALIGNMENT

Machine misalignment is considered one of the primary reasons for equipment failure and associated down time. To help you overcome the disruption caused by misalignment, Keshav Enterprises Services brings together expert knowledge and field experience with the latest technology to align machines to the highest standards. Turbine to gear box alignment, Gearbox to Mill gear box, Fiberizer, shredder, Fan, Pump, Alternator alignment, Turbine to Pump, Fan, alternator, Induction generator Alignment etc. We do perform machine levelling as well as pipe strain measurements on any size of machine frames in any location. Detailed reporting is delivered so you promptly receive the exact results and can keep detailed record

■ ERECTION & COMMISSIONING

We undertake erection and commission of Steam Turbine, Pumps, Compressor, fans, condenser, EOT cranes, Steam, water and air pipe line work, Steel structure work etc. We deliver services across every stage of the installation process, planning, execution and commissioning all critical rotating and static equipment from construction to hand over: Construction supervision to fulfil all customer quality requirements, applicable standards and OEM specifications, Coordination with OEM, Complete required documentation for handover to operation, Development and execution of pre-commissioning and commissioning procedures, Assist with start-up procedures and fine tuning to operational needs.

■ LUBE OIL FLUSHING

Our teams are fully equipped and trained lube oil flushing experts, your oil systems will achieve maximum cleanliness and de-watering following construction or oil conditioning during scheduled maintenance activities. Our purpose-built mobile centrifuge filter system delivers superior results, while our oil sampling and reporting is undertaken according to ISO standards.

SERVICES

WORKSHOP SERVICES

■ ROTOR MACHINING, GRINDING, POLISHING

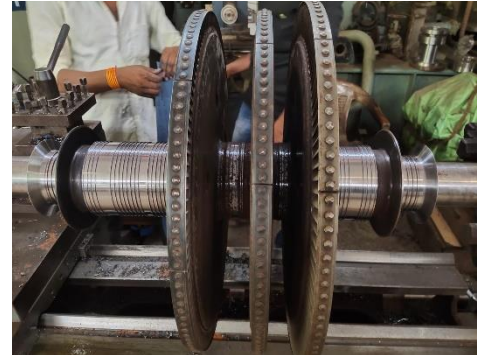

With the time rotor shaft, pump shaft, alternator shaft requires grinding of journals, under sizing of journal size, Labyrinth portion machining, etc work. We do the machining work at our precise lathes, with experienced operator, after adjusting rotor centre so that it should be concentric at all the portion. We do minimum under sizing, by removing all pitting marks and finalize size so that your rotor life should be more.

■ DYNAMIC BALANCING

All your rotor balancing needs can be met quickly and safely by Keshav Enterprises Services. Balancing ranges from 50 to 2000 kg using the latest technology and are balanced to relevant ISO/API standards. On completion, you receive a comprehensive balancing report that documents compliance with these international standards. Our balancing machines are fitted with the latest measuring systems. Plus, our balancing machines are fitted with a vibration monitoring system to identify the vibration base line prior to installation of the rotor showing mechanical and electrical run out.

■ SPARES

- COMPLETE ROTOR ASSEMBLY
- CARBON RINGS
- BEARINGS WITH THRUST PADS
- GEARS
- LABRYTHS
- GLANDS & NOZZELS
- MECHANICAL GOVERNORS
- MAIN OIL PUMPS & AUXILLARY OIL PUMPS
- WORM WHEEL
- THROTTLE & EMERGENCY STOP VALVE

FILTERS

FILTERS

KESHAV ENTERPRISES manufactures all types filtration products for Hydraulic fluids, Lubrication Systems, Industrial Liquids and gases.

LUBE OIL & CONTROL OIL FILTERS

We at KESHAV ENTERPRISES provides complete solution for Lube Oil & Control Oil Filter Elements for Turbine Lubrication System. We have supplied elements for various industries. Sugar Mills, Paper Mills, Power Plants, Distilleries, Refineries and Agro Industries.

IMPORTANCE OF CLEANLINESS

Contamination in any solid or liquid substance that is not part of a hydraulic system's working fluid. There are three principal means through which contamination can occur in a typical hydraulic system.

- It can be incorporated during system assembly.
- Generated during system operation.
- Or ingested by the system during operation

Having a reliable way to manage contamination is vital to your operation to maintain.

- Provide maximum efficient productivity.
- Reduces equipment downtime
- Minimizes safety hazards and prevents contamination related failures.
- Increase the life of system components, improves operation profitability and decreases maintenance costs.

FILTER MEDIA

GLASS FIBER FLEECE(VG)

Multilayer, pleated Construction made with synthetic fibers.

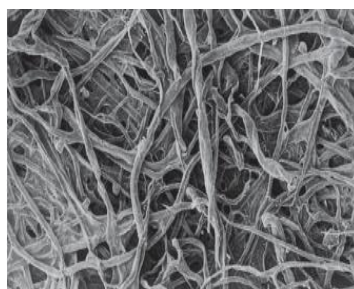

- Depth Filtration
- High dirt holding capacity
- Compatible with minerals oils, Emulsions and for most synthetic hydraulic fluids and Lubrication oils.
- Filter Fineness available. 4,5,6,10,20µm.

PAPER(P) IMPORTED MEDIA

Single layer, pleated construction made with organic Cellulose fiber fleece used for flushing operation

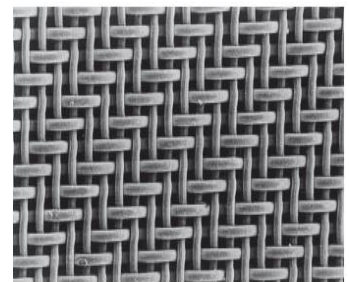

- Depth Filtration
- Consist of resin-reinforced cellulose fiber
- High burst strength
- Available in 10,20µm.

S.S. WIREMESH (G) IMPORTED MEDIA

Single or multilayer, pleated construction made with stainless steel wire mesh in different weaves, depending on retention ratings

- Surface Filtration.
- Best resistance in all hydraulic and lubrication fluids.
- Partially cleanable
- Available in 5-1500µ or as per special req.

METALLIC BELLOWS & EXPANSION JOINTS

METALLIC EXPANSION JOINTS

This array of Metallic and Non-Metallic Expansion Joints acts as suitable stress relieving solutions for various building structures and ducting systems. Stainless steel made metallic version of these products is used to absorb thermal expansion in piping system. Installation of these joints inside concrete also prevents formation of crack in building structure during fluctuation in temperature. These joints are usually placed inside sidewalks, bridges, pavement and also in slabs. Offered Expansion Joints have standard thickness and density. Being corrosion and wear protected, these joints remain functional for years.

NON-METALLIC EXPANSION JOINT

Our enterprise is the remarkable name in the market deals in Providing an extensive range of **Non Metallic Expansion Joint**. This joint is required for thermal and mechanical movement control as well as vibration absorption. This **Non Metallic Expansion Joint** is basically a flexible connector designed to provide stress relief in ducting systems. In addition to this, we offer this joint in various specifications in order to meet various requirements of customers.

STAINLESS STEEL EXPANSION JOINT

In order to meet the diverse requirements of clients, we are engaged in offering **Stainless Steel Metallic Expansion Joint**. This joint is demanded in piping systems to absorb thermal expansion or terminal movement. Our **Steel Metallic Expansion Joint** is generally required in applications where thermal expansion is an issue. We provide this joint in diverse specifications according to the needs of customers.

UNIVERSAL EXPANSION JOINT

Our firm is engaged in offering a vast array of **Universal Expansion Joint**, which is designed to absorb any combination of axial and lateral movement and angular rotation. The **Universal Expansion Joint** is tested on well-defined parameters of quality in order to eliminate all possible flaws, before offering to customers. In addition to this, we offer this joint in diverse specifications at market leading price. Moreover, this joint can also be used to absorb contraction in cryogenic lines.

CONTACT NO. 91492299448/6397363268

EMAIL : ksengg007@gmail.com

METALLIC BELLOWS & EXPANSION JOINTS

RECTANGULAR METALLIC EXPANSION JOINT

Our vast years of experience and knowledge have made us to Provide best **Rectangular Expansion Joint**. This joint is demanded to accommodate expansion and vibration caused by changes in temperature, pressure and media comprise. This **Rectangular Expansion Joint** can be availed in several specifications according to the clients requirements.

FABRIC EXPANSION JOINT

We are backed by a team of professionals that assist us in providing an extensive array of **Fabric Expansion Joint**. This joint is used to insulate, to avoid mechanical loads and to protect against abrasion. Before delivering to customers, **Fabric Expansion Joint** is checked on well-defined parameters of quality. We are giving this joint in diverse specifications according to the needs of customers.

INDUSTRIAL HEAT EXCHANGER BELLOW

We are offering an exclusive the best quality **Industrial Heat Exchanger Bellows**. These are used on fixed tube sheet heat Exchangers. To meet the variegated needs of clients, we offer these **Industrial Heat Exchanger Bellows** in various specifications at reasonable price. Our offered range is an integral part of many shell and tube heat exchanger designs.

STAINLESS STEEL HOSE PIPES

Being an eminent name in the market, we are engaged in offering **Stainless Steel 304 Flexible Hose**. This hose is simple to route, withstands vibration and thermal expansion or contraction. The **Stainless Steel 304 Flexible Hose** is tested on well-defined parameters to eradicate flaws. We are giving this hose in several specifications according to the needs of customers.

SPECIFICATION :

Outer Diameter	1/2" to 14".
Temperature Range	-20 Deg. to +350 Deg.C
Material	Stainless Steel
Technique	Hot Rolled
Pressure	0.6 - 1.6 MPa
Temperature	-20 Deg. to +350 Deg.C

CONTACT NO. 91492299448/6397363268

EMAIL : ksengg007@gmail.com

RUBBER EXPANSION BELLOWS

RUBBER EXPANSION BELLOWS

Rubber Expansion Bellows are an assembly which are used primarily in piping applications to compensate for thermal expansion and contraction, reduce noise and vibration produced by the rotating element as well as relieve pipe stress during operation. A Rubber expansion bellows consists of a specific number of convolutions, with the shape of the convolution designed to withstand the internal pressures of the pipe, but flexible enough to undergo axial, lateral, and angular movements.

SINGLE ARCH EXPANSION BELLOW

Rubber expansion joints, also known as rubber bellows, are key players in a variety of applications, offering a crucial solution for managing movement, vibration, and misalignment in pipelines and ducting systems. Easyflex rubber expansion joints are designed to absorb movement in piping and ducting systems. They are the dynamic components that flex, stretch, and compress to compensate for the forces generated by thermal expansion, pressure fluctuations, and mechanical vibrations. These joints are made from high-quality rubber compounds, making them resilient, cost-effective, and highly versatile.

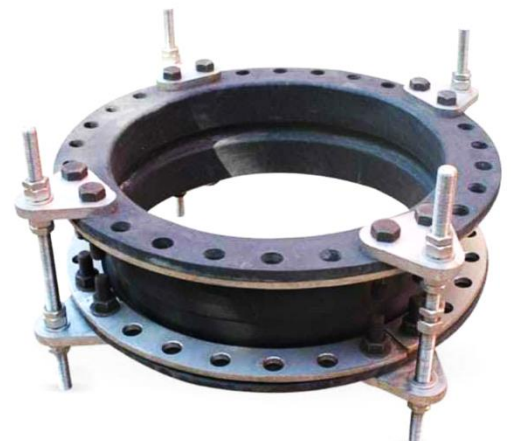

DOUBLE ARCH EXPANSION BELLOW

Greater Movement (Almost Double of Single Arch) which reduces most Of Reduces System Noise, absorb pipe movement and stress, compensate Any misalignment or offset in the line.

WIDE ARCH EXPANSION BELLOW

Greater Movement which reduces most Absorbs & Isolates Vibrations/Noise/Shock, absorb pipe movement and stress, compensate Any misalignment or offset in the line. Available with tie rod assembly (Specially Recommended)

STRAINERS

SIMPLEX BASKET STRAINER

Our Strainers have been specifically designed to meet all customer Requirements including for high pressure applications. Designed & Fabricated to ASME VIII Div.1 as standard but can also be supplied To other pressure vessel codes i.e. ASME B 31.3 etc. Standard features include low pressure drop at high velocities, stainless steel perforated baskets as per standard, vents and drains with the possibility to supply davit lifts, quick open closures, DP gauges.

MOC : CAST STEEL, STAINLESS STEEL, OTHERS ON REQUEST
RATINGS : ASME #125 , #150, #300, #600

DUPLEX TYPE STRAINER

Our Duplex Type Strainers are used to clean liquid, viscous and gaseous Media. They offer perfect protection against any undesirable particles and Are cost effective in protecting your piping system, industrial valves and Plants equipment.

MOC : CAST STEEL, STAINLESS STEEL, OTHERS ON REQUEST
RATINGS : ASME #125 , #150, #300, #600

WIDE ARCH EXPANSION BELLOW

Casted & Welded design Strainer, Element with Mesh in Horizontal & Vertical position with Flanged End, Butt Weld End and Screwed Ends.

MOC : CAST STEEL, STAINLESS STEEL, OTHERS ON REQUEST
RATINGS : ASME #125 , #150, #300, #600

CONICAL STRAINERS

Welded design, Strainer/Filter with Mesh, Install between Standard Flange. They are designed to remove foreign matter from pipe line and provide protection for pumps, meters, valves and other similar mechanical Equipment.

MOC : STAINLESS STEEL
MESH : AS PER REQUIRED.
